Cable Ties

Standard:130 st

SUSTAINABILITY

Paxxo's main products contain at least 50% recycled material or biomaterial (*does not apply to Food or Pacto*).

All production takes place with fossil-free electricity in Sweden.

QUALITY

Length and strength measured with Dart Drop are guaranteed. Each Longopac film roll is tested according to the Dart Drop method. Via a reference number, which is printed on both packaging and plastic film, we have traceability all the way to the original production (batch).

STRENGTH

Paxxo measures the strength of the plastic film according to Dart Drop and guarantees measured strength for up to two years.

The most common scientific way to measure plastic film is to apply the Dart Drop method. The implementation can be seen in its entirety on the website.

VERSIONER

Standard

The bag cassette for all the usual waste in our everyday life. Despite the bags material being incredibly thin, it is one of the strongest on the market. With Longopac, you never have to worry about bags leaking or being overfilled.

Strong

When you need a cassette that can handle material that are beyond normal weight, you choose our Strong cassette, which is stronger than our standard cassette and holds heavier waste such as cleaning materials, gravel and sludge.

Food

The bag cassette is certified and approved by Normpack (*Swedish code for food packaging material*) for handling food and medicine.

Food can be packaged for re-use and pharmaceuticals for bulk handling, safe storage and transport.

Pacto

The transparent Pacto material is weldable and can be used for closures and seals to avoid penetration of environmentally hazardous waste.

Sterile

The Sterile Longopac Mini bag cassettes are gamma-sterilized and packaged in airtight protective bags.

Biodegradable

The bio-bag cassette is used for handling food waste and other organic waste for composting.

The Bio-bag is available in two versions; Industrial Compost (IC) & Home Compost (HC). The IC cassette is mainly used for waste that goes to landfill as the material is certified for industrial composting and breaks down in six months at 60°C. The IC cassette is stronger and cheaper than the HC cassette.

Odor control

This bag cassette is extra airtight and is used with the Longopac Stand. With this you can handle odours associated with waste such as diapers.

Perforated

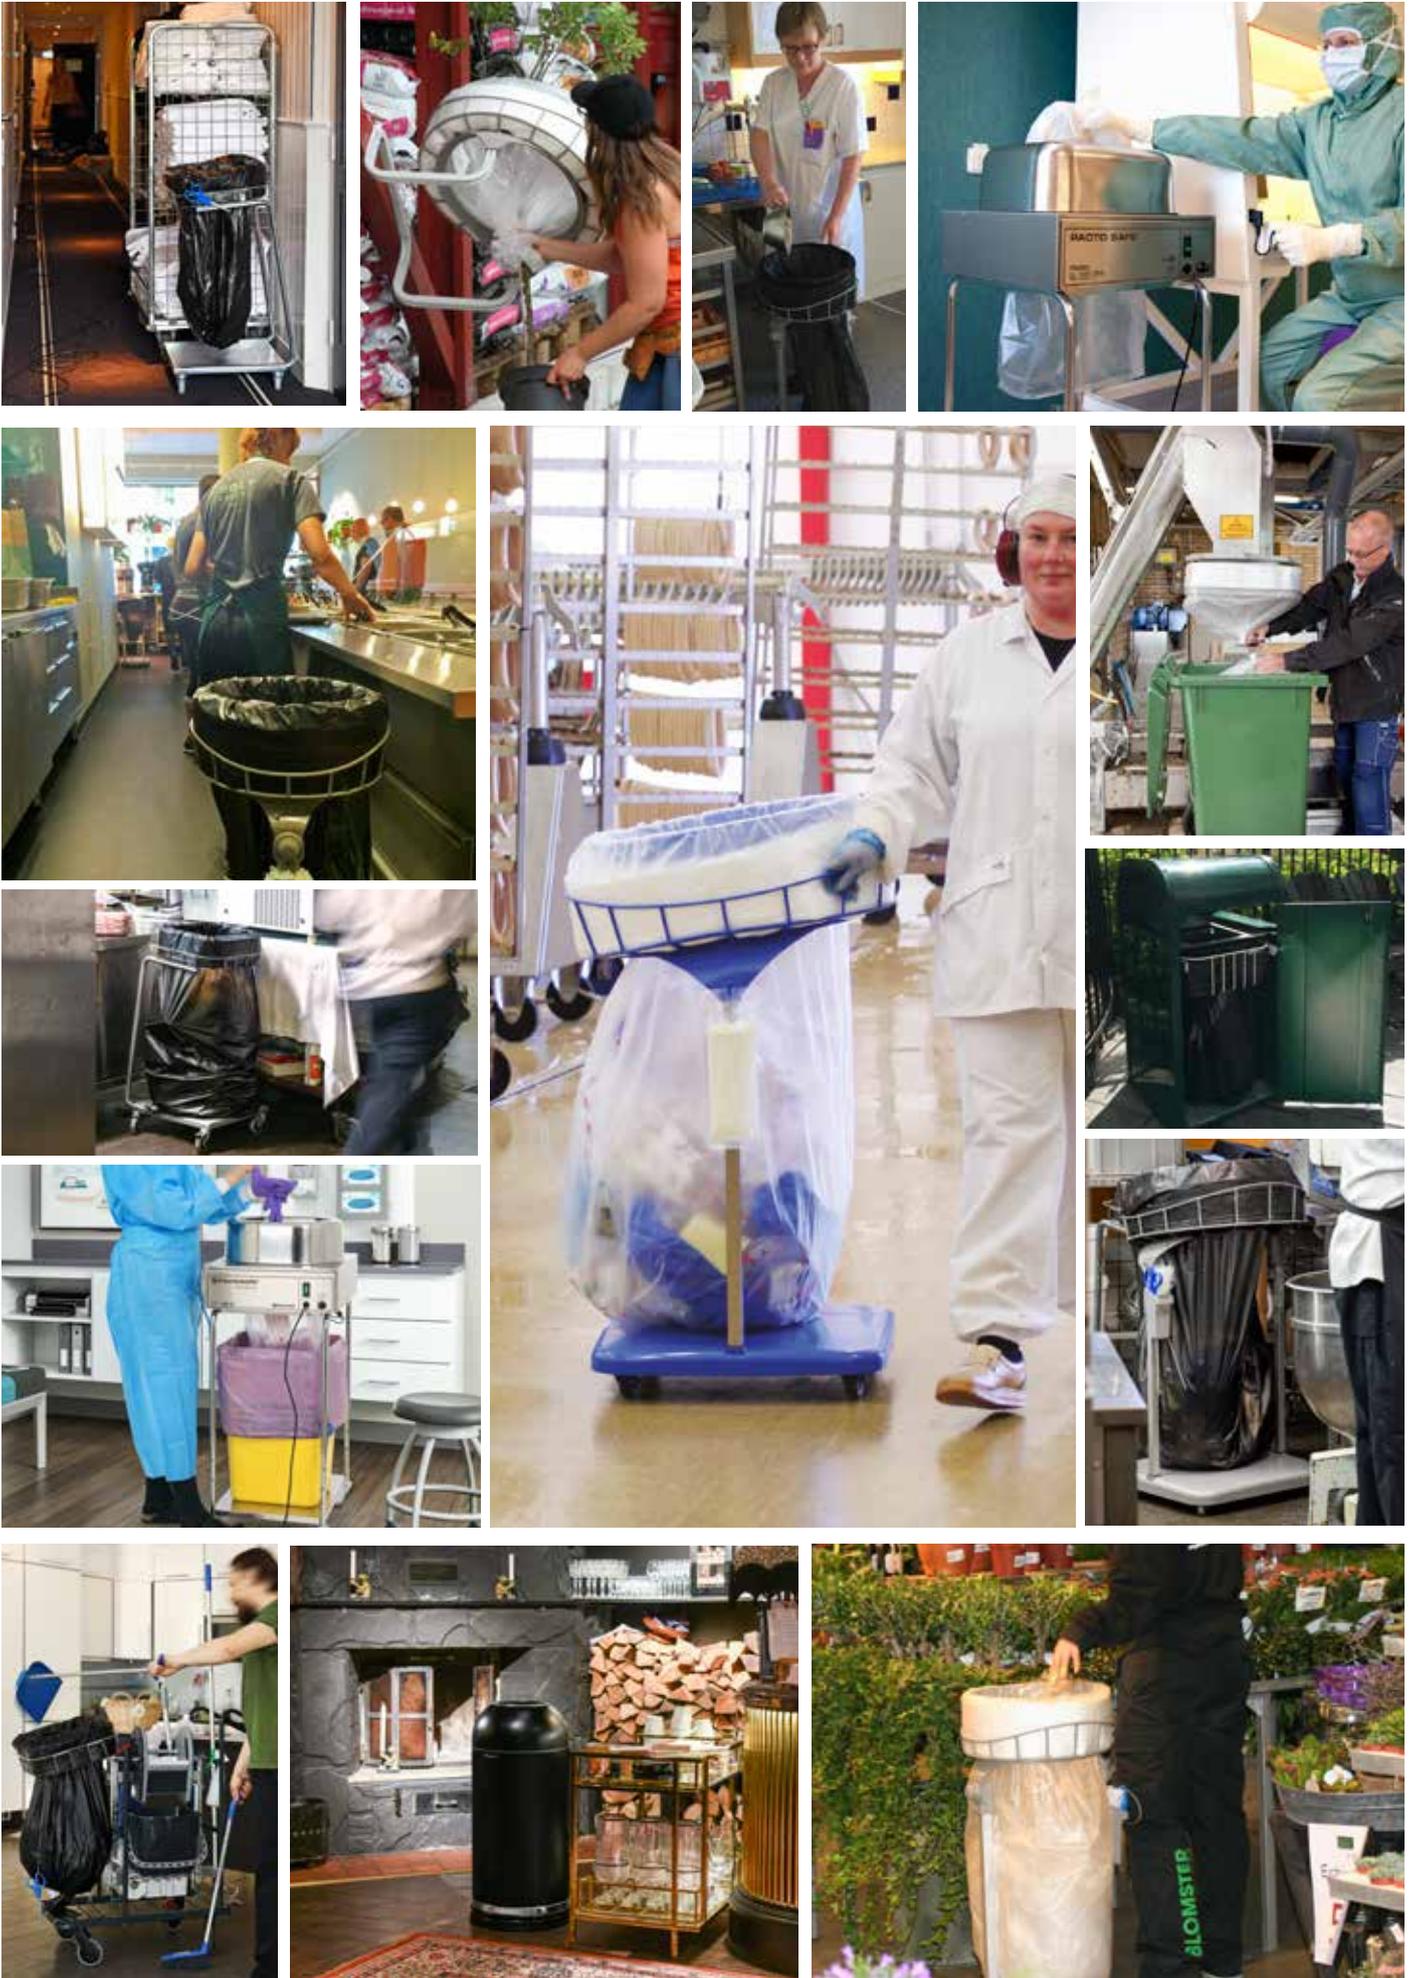

This version is only available for Longopac Maxi. The bag cassette is used when i.e. recycling plastics and gives better results in compactors because of the six perforations for every 25 cm where the excess air can get out.

ESD (*Electro Static Discharge*)

If you work in areas that require antistatic materials, our ESD cassette is the one you should use.

The value of the surface resistivity is 1.0E +10 Ohm guaranteed for 12 months from the date of production.

The Longopac system is available in a variety of designs to suit different purposes. Paxxo also offers metal detectable solutions for environments where this is required.

Hygienic • Efficient • Less CO₂

The unique Longopac® system manufactured by Paxxo enables a smarter waste management system with innovative packaging solutions for a better working environment for professional users worldwide. Longopac is more hygienic than normal bags as the user is never in contact with the waste because changing and sealing takes place from the outside of the bag.

Changing the bag takes place when you decide it is time and regardless of the amount of waste in the bag. This makes our system a more flexible solution than the usual black garbage bags on the market.

Longopac bag material is manufactured in 3-layer polyethylene, which provides a low consumption of raw materials and high strength.

The Longopac cassette is folded in a specially developed folding machine into a compact cassette. Longopac offers advantages in terms of efficiency and time-saving handling, low material consumption and low transport costs.

The Longopac cassette is available in Mini, Midi and Maxi sizes and these are produced in several colours and strengths.

Longopac is approved and certified for handling within: Odor Control, Biodegradable, Food, ESD, Sterile and has different strengths on the bag cassette.

THIS IS HOW IT WORKS

Step 1:

The bag cassette is sealed at one end with a cable tie. When the bag starts to fill or you simply want to change it, you pull the bag down to feed new material out of the cassette.

Step 2:

To seal the bag, use a cable tie at the top of the waste.

Step 3:

Attach another cable tie approximately 5cm above the first cable tie and cut the bag material between them.

The whole process
takes less than

30
seconds!

PAXXO AB

Paxxo is a Swedish based packaging company with more than a 40-year history. Our business concept is to manufacture the unique endless bag system Longopac that, thanks to innovative, smarter waste management and packaging solutions, creates a better working environment in many industries.

Our success has been possible because our products offer rational handling, a better working environment and low environmental impact. The unique Longopac system is today sold by certified partners in more than 40 countries.

Headquarters for sales, production and R&D is located in Malmö, Sweden. Sales office and distribution warehouse is located in Atlanta, Georgia, USA.

PAXXO is certificated in compliance with ISO 9001 and ISO 14001. We are continuously making our company greener and lowering our products' environmental impact.

Since 1992 Paxxo has a of donating 1 % of profits after taxes to charity.
